Debate website

Description: A website where people can express their ideas and opinions and argue with others about theres in an intelligent and sophisticated way. People nowadays are so used to just calling an idea stupid and being done with it but that's because both parties don't know how to argue.

Type: HTML and PHP

Challenges: I've had some challenges setting up a database in the past although I hope it doesn't give me as much trouble as before. I would think the most difficult part in creating this website is making the "tag" ability. I've never done that before, but I'm confident I can figure it out.

Milestones:
Week 1

Milestone 1 - Wireframe of website. Ex: Login page, main page. Then the basic outline in code. Not connected pages yet.

Milestone 2 - Setup php server.

Milestone 3 - Connect the server with the website

Week 2

Milestone 4 - Make the ability to post something

Milestone 5 - Make the ability to make an account and sign in. Also store the information of the account

Week 3

Milestone 6 - Make the website filter for keywords not allowed for debate such as "stupid". Basically just curse words so they don't appear

Week 4
Milestone 7 - Give it more design aspects. Ex: colors, rework design that fits with it

Milestone 8 - Make uploading a document or link accessible. (This is to give people the ability to site information that goes with their opinion

Week 5

Milestone 9 - Make it so people have personal bios.
Week 6

Milestone 10 - "Tutorial" when people first signup. So that they know how the website works.

Week 7

Milestone 11 - Make forums for different subjects people can debate on.

Week 8

Milestone 12 - Ability to make comments anonymously

Week 9

Milestone 13 - Make available to say "agree" or "disagree" buttons.

Week 10

Milestone 14 - Making it mobile compatible. Fixing it up so it appears properly on a mobile device.

Milestone 15 - Give people the ability to "report" that may not be appropriate for website.

Week 11

Milestone 16 - Pop out announcements when the users use words that are filtered. This will force the user to change their statement or not to post it at all.

Week 12

Milestone 17 - Being able to tag a user in a comment. Such as in Facebook where you can type the name of a user in a comment or post and it'll notify that user.

Week 13

Milestone 18 - Notification system where it announces recent actions other users make on their comments or arguments

Week 14

Milestone 19 - Make comments deletable.

Week 15

Milestone 20 - Make profile deletable.
